TECHNOLOGY

Organisation: Systers, Anita Borg Institute

Mentor: Prajakta Naik

Student: Akanksha Bodhankar

Abstract

ANITA BORG
INSTITUTE
WOMEN TRANSFORMING
TECHNOLOGY

PCSA (Peace Corps Safety App) is a web application developed to help the volunteers if they become victims of sexual harassment. It also ensures safety by sending messages to fellow volunteers when in trouble. Usually, the victims are uncomfortable to report the crime or unwilling to get support. This app ensures that the victim can be sure of getting all the help he/she needs. The sexually assaulted volunteer can get information of Peace Corps reporting and safety procedures and also contact Peace Corps for help.

1. Splash Screen

A splash screen opens up when the application is opened and then redirects to the login page

Peace Corps

First Aide

2. User Registration and Login

Registration is done using email id, name, password and country of the user. Validations also have been added

Login form uses email id and password for authentication

Once the registration is successful user is redirected to the login page

The user can logout using the option present in the menu of the application

Database table 'user' is being used for storing the data

3. Progress Bar

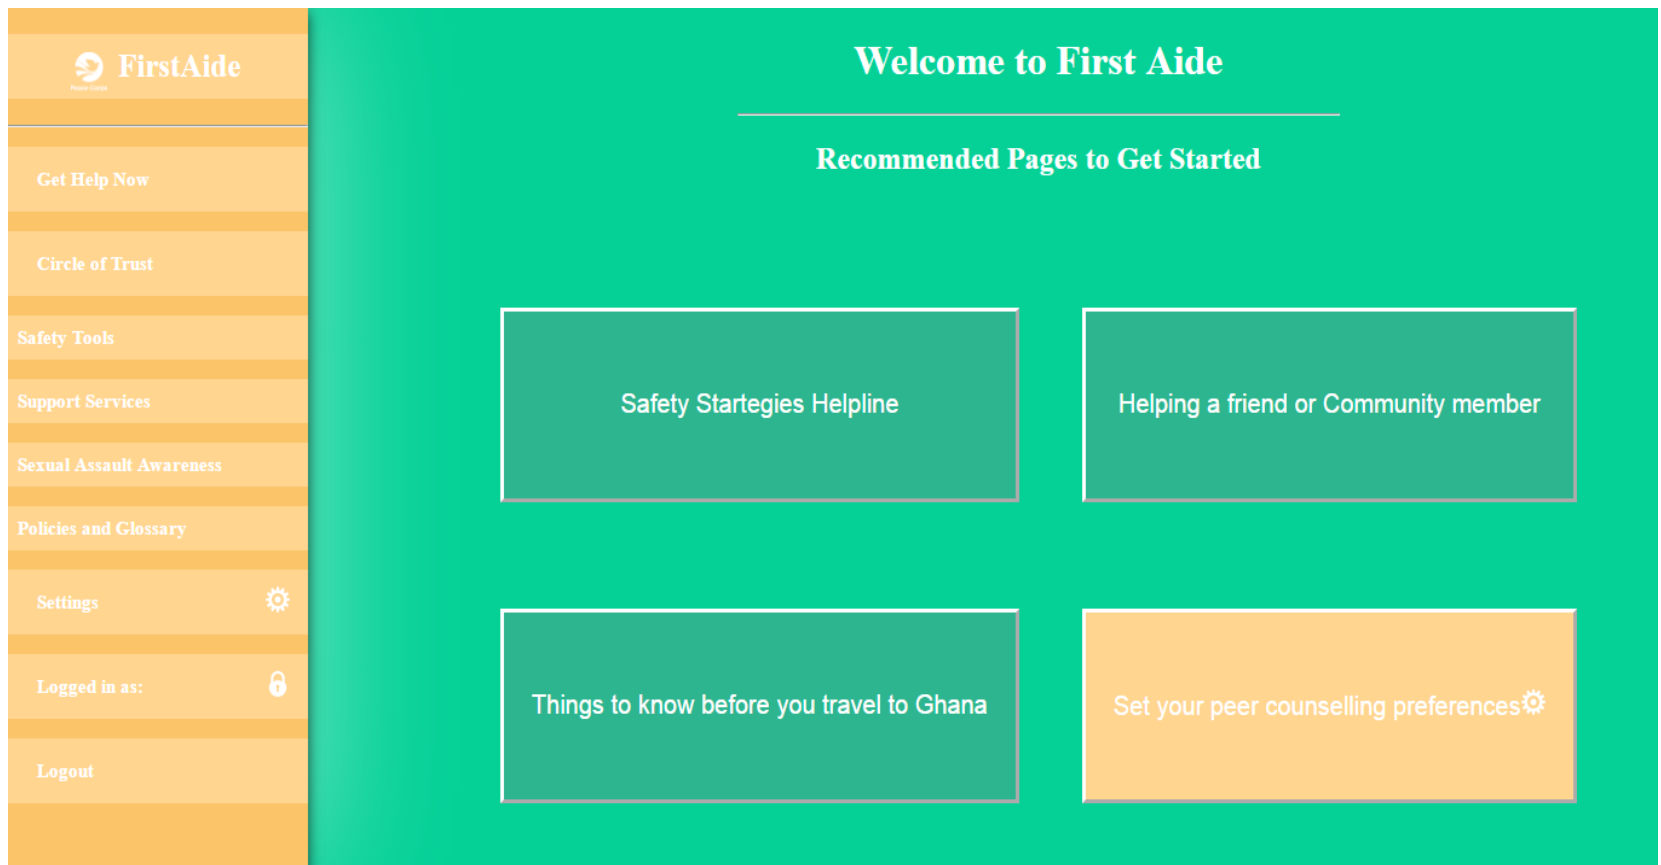

A progress bar is shown when the user logs in and then redirected to the main application.

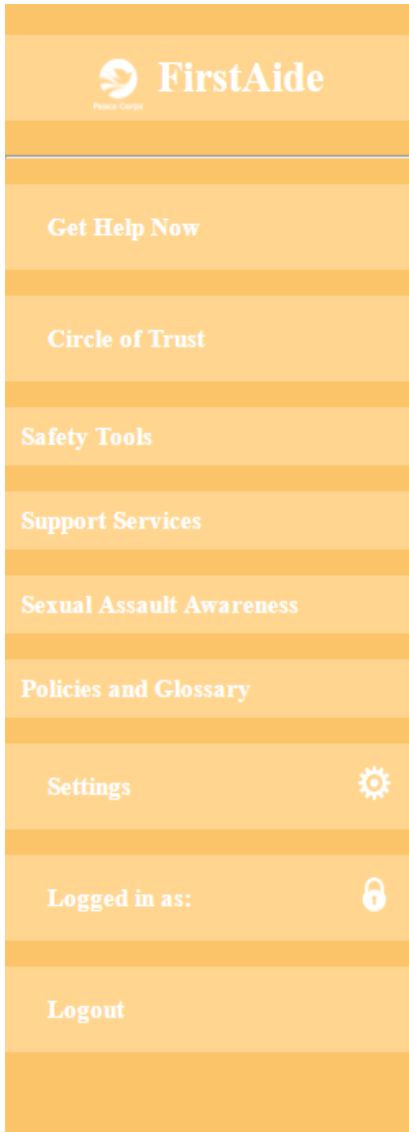

4. Welcome Page - Recommended pages to get started

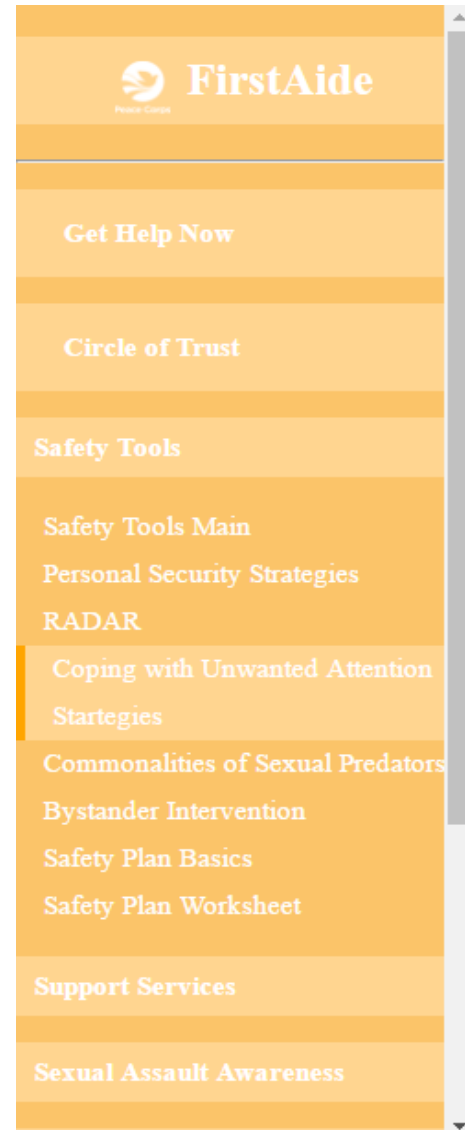

The user is redirected to this page after successful login. This is the home page of the application.

5. Menu for Navigation

The menu contains all the pages of the app placed in proper order. This makes navigation to pages easier. Placed on the left of every page.

6. Get Help Now

The user can contact helplines using this feature. Two services are provided for contacting, sending a message or making a call.

The helpline numbers vary according to the location chosen

There are three locations : Syria, Uganda and Tunisia. When a particular location is set then, phone numbers of that area will be loaded.

Sending message and making Call:

For message (SMS), body of message is taken as input from user and SMS is sent to the selected helpline number. Whereas, in Call the phone call can be connected on one button click

These functionalities are enabled using Third Party API 'Twilio' . It has been chosen because their service is reliable and has easy to use API's. It is also inexpensive.

Read more about Twilio here: <https://www.twilio.com/>

Sub-features in Get Help Now

Contact PCMO, Contact SSM and Contact SARL

When any of these features are selected (via buttons) then, a pop up is opened and an option for Voice Call or Send Message is provided in it. The user may select an option and use that service to contact PCMO or SSM or SARL

When 'Send Message' selected

If the user selects this option, the app is redirected to another page. It consists of an input box to type the body of message and a Submit button to send the message.

When 'Voice Call' selected

If the user selects this option, the app is redirected to another page. It consists of a Submit button to start a call

Note: The phone numbers of helplines are loaded automatically through backend. User need not provide them
